

Improve ROI through multi-variate analyses that predict the preferred recipes for your wells. Let Drillinginfo experts help you build a model that will determine attractive locations and landing zones and best practices for engineering techniques and drilling and completion operations for new wells.

Key Benefits:

- Receive production prediction and optimized completion techniques
- Visualize reservoir production “sweet spots” in 3D
- Combine technical datasets with well results, frac modeling, reservoir simulation and multi-variate analytics to understand the role of interference and improve completions, well spacing, and well trajectories

Customer Success: Laredo Petroleum

Wells drilled utilizing Laredo’s proprietary workflows and modeling, including DrillingInfo multi-variate analytics, experienced significantly enhanced productivity, driving benefits to Laredo’s shareholders.

PROACTIVE

EFFICIENT

COMPETITIVE

By monitoring the market, Drillinginfo continuously delivers innovative oil & gas solutions that enable our customers to sustain a competitive advantage in any environment.

Drillinginfo customers constantly perform above their competitors because they are more efficient and more proactive than the competition.
