Real-time, automatic access

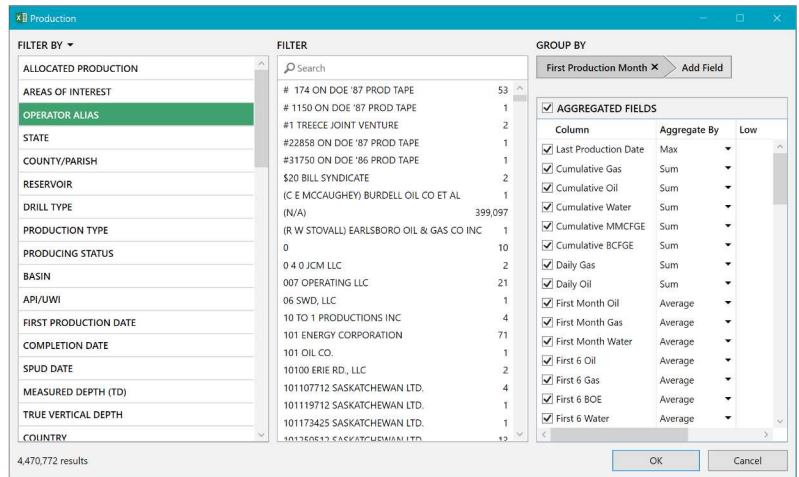

Easily populate your Excel models with Drillinginfo data. Any time there is an update to the data, your models will automatically refresh. Be confident that you are making decisions using only the most up-to-date, accurate information.

Fast and simple

Stop doing the manual work of searching for and downloading the data you need. With DI ExcelTools, you are connected directly to the Drillinginfo database. Simply select the data you need and let DI do the rest. With advanced filter functionality, you can load data from an Area of Interest (AOI) created in the DI web app, save and set your filter preferences for quick loading into future workbooks, or select from list of recent filters to populate your information.

Plug and play

Some data tools require training or technical skills. Not so with DI ExcelTools. There are no learning curves or special skills needed to get the information you need. DI ExcelTools is an intuitive, easy-to-use solution for incorporating oil and gas data into your models.
